MANITOBA ECONOMIC PERFORMANCE

1ST & 2ND QUARTERS, 1999

MANITOBA BUREAU OF STATISTICS

RIGHT ANSWERS *RIGHT NOW*

REPORT #4C

PRICE: $25 PER ISSUE

SEPTEMBER 30, 1999

100-06928/

INTRODUCTION

This is the first set of complete quarterly accounts published by the Manitoba Bureau of Statistics. Previously, only income accounts and current dollar GDP by industry data was released. These accounts now include quarterly expenditure accounts in both current and constant dollars. Quarterly GDP by industry data is still published in current dollars. A new GDP by industry account in constant dollars is now published at an annual level in MBS' annual accounts and includes the year 1998.

Since this is the first time these accounts are published, any comments or questions on the data or on the format would be appreciated.

The next release of the quarterly accounts will be in January 2000. This release will incorporate revisions from the Statistics Canada publication of provincial economic accounts to be released in November 1999 and will include revisions for the years 1994 to 1998.

NOTE TO USERS

All data in this report is seasonally adjusted. The levels in the tables are published at annual rates. The data in this report reflects the revisions to the annual data being released concurrently with this publication by MBS.

A graphical summary of key economic variables is included in this report. This is followed by seven detailed data tables covering the period from 1996 Q1 to 1999 Q2. A projection for the year 1999 is also included. The first line in the tables for each component indicates the level in millions of dollars. The second line, in smaller font, indicates the percent change from the previous period. These percent changes reflect the change from the previous quarter, in the case of quarters, and from the previous year, in the shaded total year column.

Quarterly data is also available for the years 1992 to 1995 upon request.

For more information on this publication please contact: Conrad Barber-Dueck at (204) 945-2652. (cbarberdueck@mbs.gov.mb.ca)

PICKING UP STEAM: THE MANITOBA ECONOMY GROWS 3.3% IN THE SECOND QUARTER OF 1999

SECOND QUARTER 1999 HIGHLIGHTS

- The Manitoba Bureau of Statistics estimates that **Manitoba's GDP in constant 1992 dollars expanded 3.3% at an annual rate in the second quarter** (0.8% at quarterly rates) following increases of 2.3% (0.6% quarterly) in the first quarter and 1.0% (0.2% quarterly) in the fourth quarter of 1998.

- In **current dollar terms** (not adjusted for inflation), the economy grew **5.4% annually** in the second quarter, 1.4% at quarterly rates.

- The economy **has grown 2.6% in constant dollars since the second quarter of 1998**. The 1999 year to date growth stands at 2.5%. This is line with the 2.6% growth that MBS is projecting for the province for 1999.

- **Total exports of goods and services are showing signs of recovery** after two negative quarters of growth at the end of 1998. Exports grew 1.1% in the second quarter following a 2.0% gain in the first quarter.

- Imports also have started to grow more quickly advancing 1.5% in the second quarter spurred by a 3.3% gain in **investment in machinery equipment**. These trade results leave the province's net **trade balance** (exports minus imports) at $80 million, the fifth positive result in the last six quarters.

- A **large of build up of inventories**, particularly farm inventories, occurred in the quarter. This was an important source of growth in the second quarter.

- **Labour income** increased 0.7% in the second quarter, 4.9% higher than in the second quarter of 1998 as strong employment growth continued (2.2% year to date) and the unemployment rate remained low (5.6% year to date).

- **Accrued net farm income** (includes inventory adjustment) remained at similar levels as in 1998 as increased production levels and higher government assistance was moderated by lower prices. In the second quarter, farm income dropped $23 million from a strong first quarter level as farmers build up their inventories.

- **Service producing industries have been the leaders thus far in 1999**. In the second quarter, the business services and accommodation, food and beverage industries both rose 3.0%, (current dollars) further expanding on strong growth in the first quarter. Goods producing industries did not fair as well dropping 0.3%. Mining and agriculture both showed large declines.

PROJECTED 1999 HIGHLIGHTS

- The Manitoba Bureau of Statistics has projected that **the Manitoba economy will grow 2.6% in 1999** down from 3.2% in 1998 but above the ten-year average growth for the economy of 1.7%. The projected **current dollar growth for GDP at market prices is 3.5%**. Boosted by an increase in subsidies, **GDP at factor cost** is estimated to expand 4.0% in current dollars.

- **Labour income is projected to increase 4.3% in 1999**, concurring with high employment growth and a low unemployment rate. This follows a 5.4% gain in 1998. **Personal after tax or disposable income is expected to increase 3.9%** in 1999, slightly above the 3.8% gain in 1998.

- Despite low prices, **accrued net farm income will increase 8.5%** in 1999. Increased farm production (1.5%) and government assistance (37.0%) are the chief reasons for the increase.

- **Personal expenditure**, spurred by increased spending during the Pan Am games, is expected to **advance 2.3%** in 1999. **Government expenditure** is projected to **rise 2.2%** in 1999, its largest increase since 1992.

- **Business investment** is estimated to decline 0.2% in 1999. A large decrease in investment in non-residential structures (10.5%) will be partially offset by a 5.8% gain in machinery and equipment. Investment in residential construction will advance 1.8%.

- **Government investment in capital is projected to increase 9.4%** in 1999 as both investment in structures (9.8%) and investment in machinery and equipment (8.5%), particularly computers, are expected to grow strongly.

- **Total exports of goods and services** are estimated to advance 2.2% in 1999, down from the 7.5% increase in 1998. Large gains in transportation equipment exports will be offset by decreases in exports of machinery equipment. **Imports**, slowed by reduced business investment, will rise only 1.8% in 1999. **Net trade** (exports minus imports) will equal $103 million, up from $37 million in 1998.

- **Service producing industries**, boosted by the Pan Am games will be the leaders in 1999 advancing 4.9% in current dollars. The **accommodation, food and beverage industry** will increase 8.4% over 1998 while **business services** are estimated to rise 8.1%.

- The **goods producing industries** will experience another difficult year in 1999 projected to increase 1.5%, similar to 1998's increase of 0.9%. The **manufacturing industry** is expected to slow to 3.5%, down from 6.0% growth in 1998, and in line with a slowdown in exports.

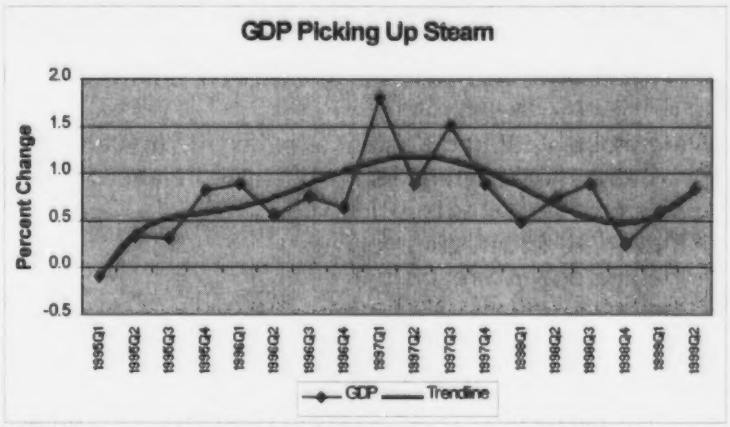
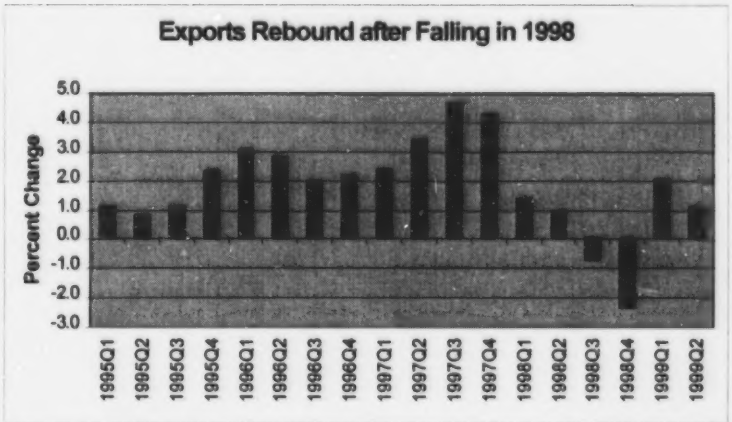
Manitoba's Economy is Picking Up Steam in the Second Quarter

After a weak fourth quarter in 1998, the Manitoba economy is starting to grow at an increasing rate, advancing 3.3% (0.8% at quarterly rates) in the second quarter of 1999 following a 2.3% increase (0.6% at quarterly rates) in the first quarter. This increase in economic activity has resulted in the economy growing 2.6% (all growth rates in constant dollar measures unless specified) since the second quarter of 1998. This is in line with the 2.6% growth projected by MBS for the province in 1999. These results are weaker than the growth seen in 1997 and 1998 (4.5 and 3.2 respectively) however compare favourably with the 1.7% average growth of the last ten years. The average growth for the last five years is 3.3%. The projected 1999 growth rate is based on a third quarter increase of 0.8% and a fourth quarter increase of 0.6%. In current dollars, the economy grew 5.4% annually in the second quarter (1.4% at quarterly rates). The economy is projected to advance 3.5% in nominal dollars as prices will increase 0.9%.



Exports Rebounding

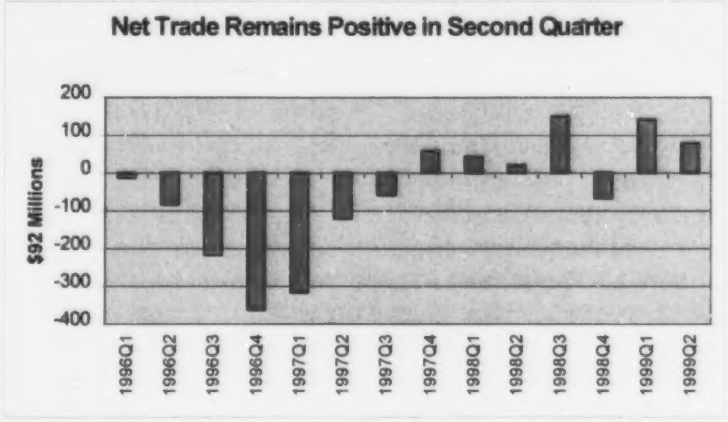
After declining in the last two quarters of 1998, total exports of goods and services (international and interprovincial) have begun to expand again in 1999. Exports grew 1.1% in the second quarter following a 2.0% gain in the first quarter of 1999. The decline in 1998 was caused by a downturn in machinery and equipment exports, in particular farm implements. With machinery and equipment exports stabilizing, large increases in transportation equipment exports, 31.3% year to date, have resulted in the quarterly gains in 1999. Exports are projected to continue to grow for the rest of the year as the



United States economy, the destination of the majority of Manitoba's international exports, is expected to remain strong. The Canadian economy also continues to show strength boding well for Manitoba's interprovincial exports. The Canadian dollar shows few signs of increasing relative to the U.S., another factor that will continue to keep exports strong. The estimated growth rate for total exports of goods and services is 2.2%.

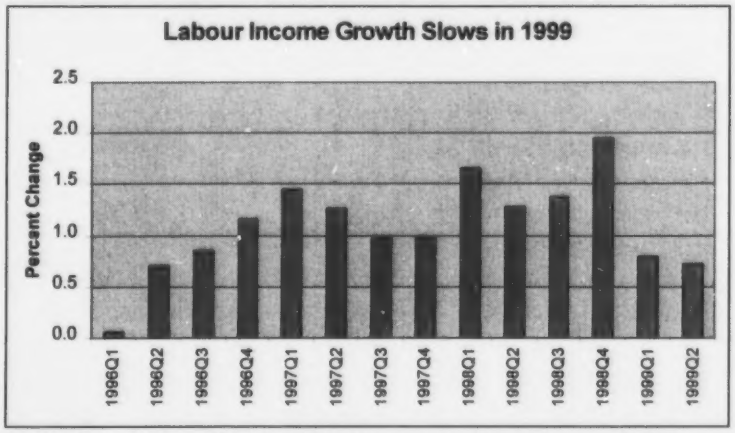
Net Trade Continues to Add to GDP Growth

Manitoba's net trade balance (exports minus imports) in 1999 continued to expand after reaching its first positive balance in 1998 ($37 million). In the second quarter, net trade was $80 million, the fifth positive result in the last six quarters. The balance for 1999 is projected to equal $103 million. The net balance for international trade is expected to reach $475 million in 1999. Interprovincially, the balance is projected to remain negative in 1999 equaling an estimated -$372 million.



Labour Income Slows in Second Quarter

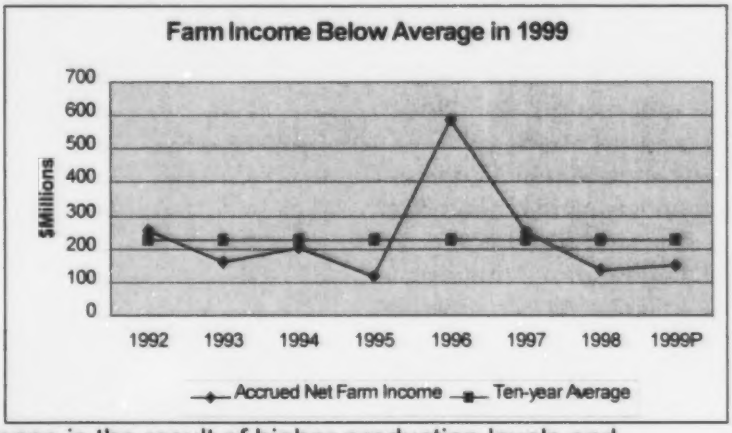
Despite strong employment growth (2.2% year to date) and a low unemployment rate (5.6% year to date), labour income slowed in the second quarter, advancing 0.7% (2.9% at annual rates). Labour income is projected to increase 4.3% in 1999, following a 5.4% gain in 1998. The ten-year average for labour income is 3.4%. The last two quarters of 1999 are expected to increase at similar rates as the first two quarters as Pan Am related activities will provide a boost to income that will be partially offset by a slowdown in the goods producing industries. Personal after tax or disposable income will advance 3.9% in 1999 slightly above the 3.8% increase in 1998. This increase is mainly due to



a decrease in personal income tax rates over the year. The "traditional" personal savings rate is expected to equal 4.8% for 1999, the same as 1998 and well above the national rate of 1.4% for the second quarter.

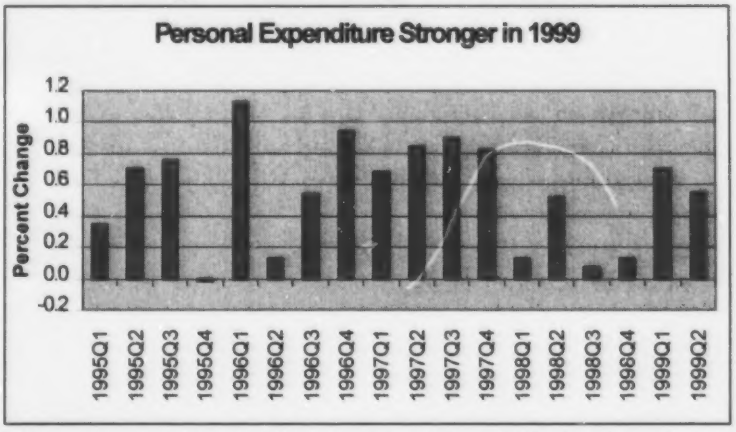
Farmers Still Struggling Due to Low Prices

Accrued net farm income dropped 12.9% in the second quarter, as low prices for nearly all agricultural products remained a concern. GDP for the agricultural industry was down 3.4% in the quarter. A large build up of inventories, especially in livestock, was a chief reason for the reduction in income. Annually, accrued farm income is expected to reach $149 million in 1999, an increase of 8.5%. The increase is the result of higher production levels and increased government assistance. This level, however, is well below the ten-year average of $226 million. The GDP of the agricultural industry is expected to advance 0.9% in 1999 in current dollars, again as higher production is offset by lower prices.



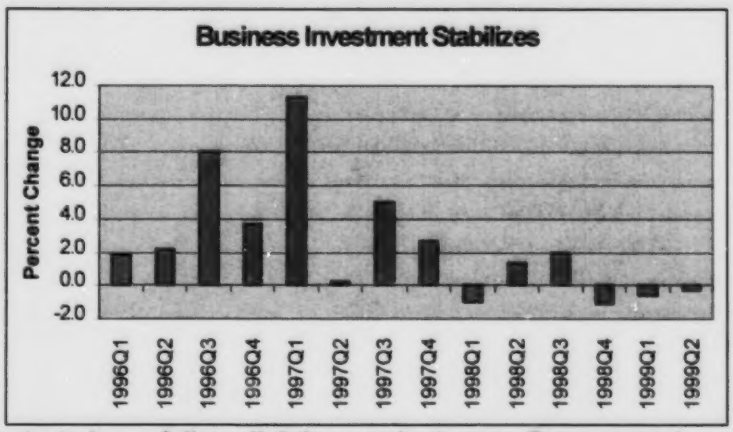
Personal Expenditure Stronger in 1999

Following a slowdown in 1998 when constant dollar personal expenditure increased only 1.9%, consumer spending has started to gain momentum in 1999. In the second quarter, spending increased 0.5% following a 0.7% in the first quarter. With the Pan Am games expecting to result in strong growth in the third quarter, personal expenditure is projected to rise 2.3% in 1999. Expenditures on services will be the source of strength. Spending on durable goods like cars and trucks has been quite stable in recent quarters after large increases in 1997.



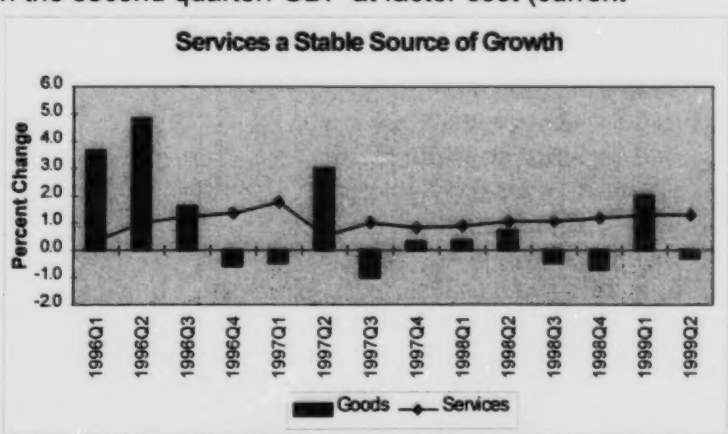
Capital Investment Slows After Strong Expansion in 1998

After two years of strong growth, business investment in capital is expected to decline 0.2% constant dollars in 1999. Business capital investment declined 0.3% in the second quarter as a 5.7% drop in investment in non-residential structures more than offset a 3.3% increase in machinery and equipment. Since over 90% of machinery and equipment is imported, the large gain is in line with an increase in imports (1.5%) in the second quarter. Investment in machinery and equipment has been boosted by a large gain in computer purchases. Investment in residential construction has remained flat in the two quarters of 1999 as housing starts have fallen slightly over last year. Government investment increased 1.5% in the quarter and is estimated to remain strong in 1999. Computer purchases will continue to advance machinery and equipment investment (8.5%) while investment in structures is expected to increase 9.8% on the strength of increased spending in health care facilities in 1999.

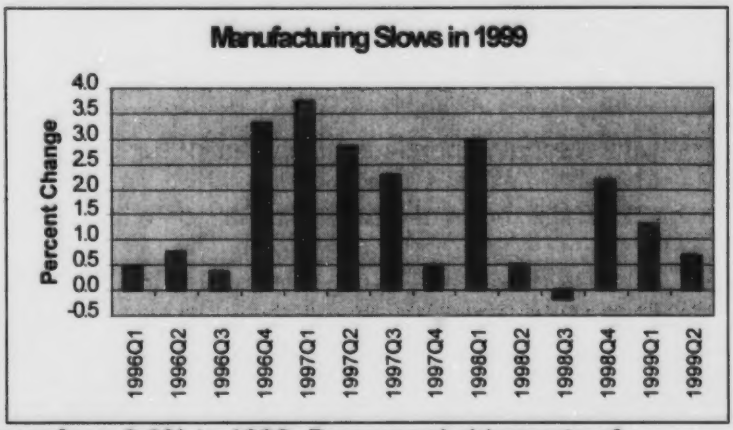


Service Industries Leading the Way

Viewing the economy from an industry basis, service-producing industries were the chief reason for growth in the second quarter. GDP at factor cost (current dollars) grew 0.9% in the quarter, 3.5% at an annual rate. Services expanded 1.3% in the quarter while goods producing industries actually decreased 0.3%. Business services, spurred by Y2K spending, and the accommodation, food and beverage industry, aided by a low Canadian dollar, both advanced 3.0%. These two industries are projected to increase 8.1% and 8.4% respectively in 1999 allowing service industries to expand 4.9% in the year. Growth amongst other service industries is widespread and in fact, all industries are projected to rise by over 3.0% in 1999.



This rosy picture can not be extended to the goods producing industries. These industries, which are expected to increase 1.5% in 1999 in current dollars, are suffering from low commodity prices. Mining, which decreased 3.8% in the second quarter, is the hardest hit by these low prices. Manufacturing output has also been slowing down. The second quarter advanced only 0.6%, down from a 1.4% gain in the first quarter. The total estimated increase in the year is projected at 3.5%, down from 6.0% in 1998. Decreased shipments of machinery and equipment products, mostly farm implements, have been the chief reason for this slowdown. Large increases in transportation equipment manufacturing have partially offset this decline. Construction, another goods producing industry, has been slowed by decreasing housing starts and decreased investment in non-residential structures. Low water levels, resulting in fewer exports, have hurt the hydro portion of the Utilities industry.



Prices on the Rise

After two years of little or negative growth in the GDP price index, the first two quarters of 1999 have experienced increased prices. In the first quarter of 1999 prices rose 1.8% (0.4% quarterly) and they climbed another 2.1% (0.5% quarterly) in the second quarter. The chief reason for this advance was a decrease in import prices mainly driven by computer purchases. The GDP price index for 1999 is expected to advance 0.9%. The personal expenditure index, the one most closely aligned with the CPI, is projected to climb 1.4%.

GRAPHICAL SUMMARY

The following pages provide a graphical summary of important economic indicators in the Manitoba economy. They are:

(1) GDP at Market Prices, Constant 1992 Dollars

(2) Personal Expenditure, Constant 1992 Dollars

(3) Total Exports of Goods and Services, Constant 1992 Dollars

(4) GDP at Market Prices, Current Dollars

(5) Labour Income, Current Dollars

(6) Personal Income, Current Dollars

(7) Personal Disposable Income, Current Dollars

(8) Accrued Net Farm Income, Current Dollars

(9) GDP at Factor Cost, Current Dollars

(10) Agriculture GDP, Current Dollars

(11) Non-Agriculture GDP, Current Dollars

(12) Manufacturing GDP, Current Dollars

The graphs cover the quarters between the first quarter of 1992 and the second quarter of 1999. A trendline of the series has also been included in the graphs since quarterly data often displays some degree of quarter to quarter variability. The trendline therefore is a useful analytical tool for tracking the movements of a variable. Projected data has not been included in the graphs.

DEFINITION OF TERMS

Gross Domestic Product (GDP) – is a measure of the unduplicated value of production within the boundaries of a region (e.g. Manitoba). The ownership of the factors of production (i.e. land, labour or capital) may be from outside the region.

GDP at Market Prices – is a measure of GDP expressed in terms of prices that a purchaser would pay for the goods. Therefore, it includes all taxes and also the effects of subsidies on the price of goods.

GDP in Constant Dollars – also referred to as real GDP, is a measure of GDP that uses volumes of the current year and the price of a base year. The base year for these accounts is 1992. This measure is used to estimate what economic growth would be if there was no changes in prices.

GDP in Current Dollars – also referred to as nominal GDP, is a measure of GDP that uses volumes and prices of the current year. Therefore, any changes in prices will be included in the total. This measure is useful when analyzing actual income received.

GDP at Factor Cost – is a measure of GDP expressed in terms representing the cost to the producers. Taxes and subsidies which affect the price to the purchaser, but not the cost of production, are therefore not included in this measure. The GDP by industry table uses this measure.

Final Domestic Demand – is a measure of how the economy performs excluding the effects of international trade and inventory changes. Final Domestic Demand is calculated by summing personal and government expenditures plus business and government investment. In these accounts, it is estimated in both current and constant dollars.

Personal Income – is the sum of incomes received by persons within a region (e.g. Manitoba). The income may come from current factors of production (i.e. labour income) or from transfers from government, business or non-residents. Capital gains are not included. Investment income collected by life insurance companies or collected from pension plans on behalf of individuals is included.

Personal Disposable Income – equals Personal Income minus direct taxes and other transfers from persons to government. It can also be referred to as personal after tax income.

Personal Savings – equal Personal Disposable Income minus personal expenditures on goods and services and less any other transfer of income to businesses or non-residents.

MANITOBA ECONOMIC PERFORMANCE

3RD QUARTER, 1999

MANITOBA BUREAU OF STATISTICS

RIGHT ANSWERS RIGHT NOW

REPORT #4C

PRICE: $25 PER ISSUE

JANUARY 27, 2000

PAN-AM IMPACT: THE MANITOBA ECONOMY GROWS 3.6% IN THE THIRD QUARTER OF 1999

THIRD QUARTER HIGHLIGHTS

- The Manitoba Bureau of Statistics estimates that **Manitoba's GDP** in constant 1992 dollars **expanded 3.6% at an annual rate in the third quarter** (0.9% at quarterly rates) following revised increases of 2.9% (0.7% quarterly) in the second quarter and 2.7% (0.7% quarterly) in the first quarter of 1999. The strong economic growth can partially be attributed to the **Pan-Am games** held in the province during this quarter.

- In **current dollar terms** (not adjusted for inflation), the economy grew **5.5% annually** in the third quarter, 1.4% at quarterly rates.

- The economy **has grown 2.1% in constant dollars since the third quarter of 1998**. The 1999 year to date growth stands at 2.0%. This is line with the 2.3% growth that MBS is projecting for the province for 1999.

- **Total exports of goods and services are showing signs of recovery** after two negative quarters of growth at the end of 1998. Exports grew 0.4% in the third quarter following a 0.9% gain in the second quarter.

- **Import** growth has remained flat in the third quarter despite an impressive 4.9% gain in **investment on machinery and equipment**. These import results leave the province's net **trade balance** (exports minus imports) at minus $675 million, the best showing since the first quarter of 1998.

- **Labour income** increased 1.1% in the third quarter, 4.5% higher than in the third quarter of 1998 as employment growth continued (2.0% year to date) and the unemployment rate remained low (5.6% year to date).

- **Accrued net farm income** (includes inventory adjustment) decreased 5.7% in the third quarter reflecting poor crop results. An increase in livestock receipts only partially offset the decreased crop receipts.

- **Service producing industries have been the leaders thus far in 1999**. In the third quarter, the business services and accommodation, food and beverage industries both rose over 3.0%, (current dollars) further expanding on strong growth in the second quarter. Goods producing industries did not fair as well expanding a moderate 0.7%. Mining and agriculture both showed declines.

NOTE TO USERS

The data in this report reflect the revisions to the annual data being released concurrently with this publication by MBS. The revisions cover the period from 1992 to 1999.

A graphical summary of key economic variables is included in this report. This is followed by seven detailed data tables covering the period from 1996 Q1 to 1999 Q3. A projection for the year 1999 is also included.

All data in this report is seasonally adjusted. The levels in the tables are published at annual rates. The first line in the tables for each component indicates the level in millions of dollars. The second line, in smaller font, indicates the percent change from the previous period. These percent changes reflect the change from the previous quarter, in the case of quarters, and from the previous year, in the shaded total year column.

Quarterly data is available for the years 1992 to 1995 upon request.

For more information on this publication please contact: Conrad Barber-Dueck at (204) 945-2652. (cbarberdueck@mbs.gov.mb.ca)

MANITOBA ECONOMIC ACCOUNTS

DEFINITION OF TERMS

Gross Domestic Product (GDP) – is a measure of the unduplicated value of economic production within the boundaries of a region (e.g. Manitoba). The ownership of the factors of production (i.e. land, labour or capital) may be from outside the region.

GDP at Market Prices – is a measure of GDP expressed in terms of prices that a purchaser would pay for the goods. Therefore, it includes all taxes and also the effects of subsidies on the price of goods.

GDP in Constant Dollars – also referred to as real GDP, is a measure of GDP that uses volumes of the current year and the price of a base year. The base year for these accounts is 1992. This measure is used to estimate what economic growth would be if there was no changes in prices.

GDP in Current Dollars – also referred to as nominal GDP, is a measure of GDP that uses volumes and prices of the current year. Therefore, any changes in prices will be included in the total. This measure is useful when analyzing actual income received.

GDP at Factor Cost – is a measure of GDP expressed in terms representing the cost to the producers. Taxes and subsidies which affect the price to the purchaser, but not the cost of production, are therefore not included in this measure. GDP by industry estimates use this measure.

Final Domestic Demand – is a measure of how the economy performs excluding the effects of international trade and inventory changes. Final Domestic Demand is calculated by summing personal and government expenditures plus business and government investment. In these accounts, it is estimated in both current and constant dollars.

Personal Income – is the sum of incomes received by persons within a region (e.g. Manitoba). The income may come from current factors of production (i.e. labour income) or from transfers from government, business or non-residents. Capital gains are not included. Investment income collected by life insurance companies or collected from pension plans on behalf of individuals is included.

Personal Disposable Income – equals Personal Income minus direct taxes and other transfers from persons to government. It can also be referred to as personal after tax income.

Personal Savings – equal Personal Disposable Income minus personal expenditures on goods and services and less any other transfer of income to businesses or non-residents.

GRAPHICAL SUMMARY

The following pages provide a graphical summary of important economic indicators in the Manitoba economy. They are:

(1) GDP at Market Prices, Constant 1992 Dollars

(2) Personal Expenditure, Constant 1992 Dollars

(3) Total Exports of Goods and Services, Constant 1992 Dollars

(4) GDP at Market Prices, Current Dollars

(5) Labour Income, Current Dollars

(6) Personal Income, Current Dollars

(7) Personal Disposable Income, Current Dollars

(8) Accrued Net Farm Income, Current Dollars

(9) GDP at Factor Cost, Current Dollars

(10) Agriculture GDP, Current Dollars

(11) Non-Agriculture GDP, Current Dollars

(12) Manufacturing GDP, Current Dollars

The graphs cover the quarters between the first quarter of 1994 and the third quarter of 1999. A trendline of the series has also been included in the graphs since quarterly data often displays some degree of quarter to quarter variability. The trendline therefore is a useful analytical tool for tracking the movements of a variable. Projected data has not been included in the graphs.

MANITOBA ECONOMIC PERFORMANCE

4TH QUARTER, 1999

MANITOBA BUREAU OF STATISTICS

RIGHT ANSWERS *RIGHT NOW*

REPORT #4C

PRICE: $25 PER ISSUE

APRIL 4, 2000

PREPARING FOR Y2K: THE MANITOBA ECONOMY GROWS 3.8% IN THE FOURTH QUARTER OF 1999

FOURTH QUARTER HIGHLIGHTS

- The Manitoba Bureau of Statistics estimates that **Manitoba's GDP** in constant 1992 dollars **expanded 3.8% at an annual rate in the fourth quarter** (1.0% at quarterly rates) following revised increases of 4.0% (1.0% quarterly) in the third quarter and 3.5% (0.9% quarterly) in the second quarter of 1999. The strong economic growth can partially be attributed to an increase in personal spending and business spending in **preparation for Y2K**. Investment in non-farm inventories increased $116 million.

- In **current dollar terms** (not adjusted for inflation), the economy grew **6.1% annually** in the fourth quarter, 1.5% at quarterly rates.

- The economy **has grown 3.4% in constant dollars since the fourth quarter of 1998**, well above the growth rate of 2.2% for the year. This implies that the economy ended the year on a strong note, a good sign for the year 2000.

- **Total exports of goods and services are showing signs of recovery.** After two negative quarters of growth at the end of 1998, exports have grown four consecutive quarters. Exports grew 0.6% in the fourth quarter following a 0.4% gain in the third quarter.

- **Import** growth saw a sharp 1.5% increase in the fourth quarter largely as a result of a 2.1% gain in **investment on machinery and equipment**. These import results leave the province's net **trade balance** (exports minus imports) at minus $788 million, a large drop from the third quarter.

- **Labour income** increased 1.2% in the fourth quarter, 4.0% higher than in the fourth quarter of 1998. For the year, labour income advanced 4.7%, the third consecutive year of growth above four percent.

- **Accrued net farm income** (includes inventory adjustment) increased 0.9% in the fourth but still decreased 2.2% year over year as increased livestock receipts only partially offset lower crop receipts.

- **Service producing industries have been the leaders thus far in 1999**. In the fourth quarter, the transportation and storage industry, boosted by a Y2K related increase in business inventories, advanced at 4.2%. Goods producing industries did not fair as well as mining decreased 7.6%, chiefly as a result of the lockout at Inco during two months of the quarter.

MANITOBA ECONOMIC ACCOUNTS

NOTE TO USERS

The data in this report reflect the revisions to the annual data being released concurrently with this publication by MBS. The revisions cover the period from 1993 to 1999.

A graphical summary of key economic variables is included in this report. This is followed by seven detailed data tables covering the period from 1996 Q1 to 1999 Q4.

All data in this report is seasonally adjusted. The levels in the tables are published at annual rates. The first line in the tables for each component indicates the level in millions of dollars. The second line, in smaller font, indicates the percent change from the previous period. These percent changes reflect the change from the previous quarter, in the case of quarters, and from the previous year, in the shaded total year column.

Quarterly data is available for the years 1992 to 1995 upon request.

For more information on this publication please contact: Conrad Barber-Dueck at (204) 945-2652. (cbarberdueck@mbs.gov.mb.ca)

DEFINITION OF TERMS

Gross Domestic Product (GDP) – is a measure of the unduplicated value of economic production within the boundaries of a region (e.g. Manitoba). The ownership of the factors of production (i.e. land, labour or capital) may be from outside the region.

GDP at Market Prices – is a measure of GDP expressed in terms of prices that a purchaser would pay for the goods. Therefore, it includes all taxes and also the effects of subsidies on the price of goods.

GDP in Constant Dollars – also referred to as real GDP, is a measure of GDP that uses volumes of the current year and the price of a base year. The base year for these accounts is 1992. This measure is used to estimate what economic growth would be if there was no changes in prices.

GDP in Current Dollars – also referred to as nominal GDP, is a measure of GDP that uses volumes and prices of the current year. Therefore, any changes in prices will be included in the total. This measure is useful when analyzing actual income received.

GDP at Factor Cost – is a measure of GDP expressed in terms representing the cost to the producers. Taxes and subsidies which affect the price to the purchaser, but not the cost of production, are therefore not included in this measure. GDP by industry estimates use this measure.

Final Domestic Demand – is a measure of how the economy performs excluding the effects of international trade and inventory changes. Final Domestic Demand is calculated by summing personal and government expenditures plus business and government investment. In these accounts, it is estimated in both current and constant dollars.

Personal Income – is the sum of incomes received by persons within a region (e.g. Manitoba). The income may come from current factors of production (i.e. labour income) or from transfers from government, business or non-residents. Capital gains are not included. Investment income collected by life insurance companies or collected from pension plans on behalf of individuals is included.

Personal Disposable Income – equals Personal Income minus direct taxes and other transfers from persons to government. It can also be referred to as personal after tax income.

Personal Savings – equal Personal Disposable Income minus personal expenditures on goods and services and less any other transfer of income to businesses or non-residents.

GRAPHICAL SUMMARY

The following pages provide a graphical summary of important economic indicators in the Manitoba economy. They are:

(1) GDP at Market Prices, Constant 1992 Dollars

(2) Personal Expenditure, Constant 1992 Dollars

(3) Total Exports of Goods and Services, Constant 1992 Dollars

(4) GDP at Market Prices, Current Dollars

(5) Labour Income, Current Dollars

(6) Personal Income, Current Dollars

(7) Personal Disposable Income, Current Dollars

(8) Accrued Net Farm Income, Current Dollars

(9) GDP at Factor Cost, Current Dollars

(10) Agriculture GDP, Current Dollars

(11) Non-Agriculture GDP, Current Dollars

(12) Manufacturing GDP, Current Dollars

The graphs cover the quarters between the first quarter of 1994 and the fourth quarter of 1999. A trendline of the series has also been included in the graphs since quarterly data often displays some degree of quarter to quarter variability. The trendline therefore is a useful analytical tool for tracking the movements of a variable. Projected data has not been included in the graphs.
